

Endocrine Disruptor Statement of Compliance

September 14, 2020

To Our Valued Customers:

In 2016 the EU announced that it would evaluate the endocrine disrupting properties of approximately 600 substances. Presently there are only sixteen substances that are classified as endocrine disruptors under the REACH Regulation, and only two as biocides. All of the REACH endocrine disrupting chemicals have been added to the Candidate List, with fourteen of the sixteen being classified as environmental endocrine disruptors. Six are classified as human endocrine disruptors.

The ECHA's endocrine disruptor (ED) assessment list includes the substances undergoing an ED assessment under REACH or the Biocidal Products Regulation. This list was last updated September 10, 2020.

K-Tube Technologies is a manufacturer and distributor of laser welded tubing, and does not melt or produce any of the raw materials used in our products. Furthermore, our products do not contain any of the chemicals listed on the Endocrine Disruptors Assessment List.

K-Tube Technologies does not knowingly add or expose raw materials to any of the substances currently listed the regulations above, and works to remain compliant with the Endocrine Disruptors rules outlined in the standards.

If you have any questions, please feel free to contact me.

Respectfully Submitted,

Rocky Giddens
