

Registration, Evaluation, Authorization, and restriction of Chemicals (REACH) SVHC Statement of Compliance

September 23, 2025

Valued Customers:

K-Tube Technologies affirms that our tubing products are fully compliant with the European Union REACH Regulation (EC) No 1907/2006 obligations under Article 33 related to the presence of Substances of Very High Concern (SVHCs). This declaration is based on the most recent revision of the REACH Candidate List, published by the European Chemicals Agency (ECHA) on 25 June 2025, which includes 250 entries.

Our products are classified as "articles" under REACH, as they are manufactured with a specific shape and function and do not contain substances intended for release under normal or reasonably foreseeable conditions of use.

The stainless steel used in our tubing contains the following alloying elements:

- Nickel (CAS 7440-02-0): up to 10.5% w/w
- Cobalt (CAS 7440-48-4): up to 0.5% w/w

Both substances are currently listed on the REACH Candidate List of SVHCs due to their classification as carcinogenic and toxic to reproduction. As their concentrations exceed the 0.1% w/w threshold, K-Tube Technologies fulfills its obligations to:

- Disclose the presence of SVHCs to downstream users.
- Provide sufficient information for safe use upon request.

We rely on certifications from upstream material suppliers confirming REACH compliance and monitoring of SVHC thresholds. However, based on our final product composition, we acknowledge and fulfill our responsibility to declare SVHCs in accordance with REACH requirements.
